

# Guardian HYPER 5000 Hand Held Explosive Scanner

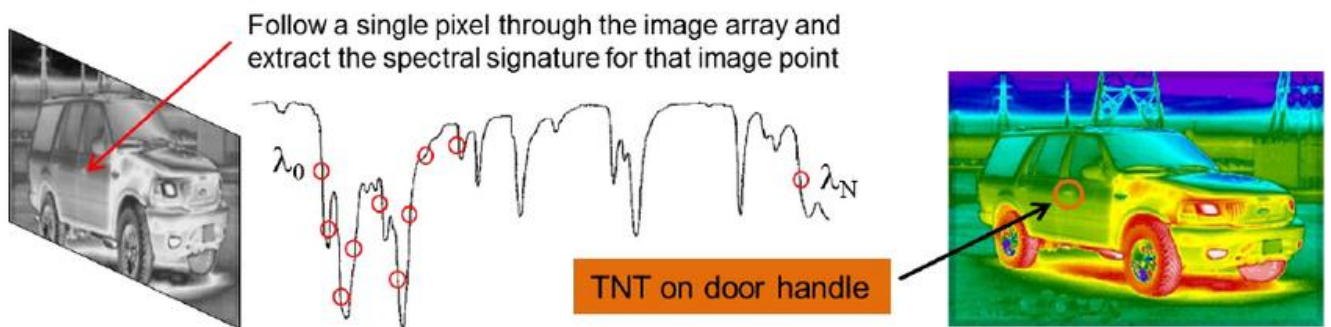

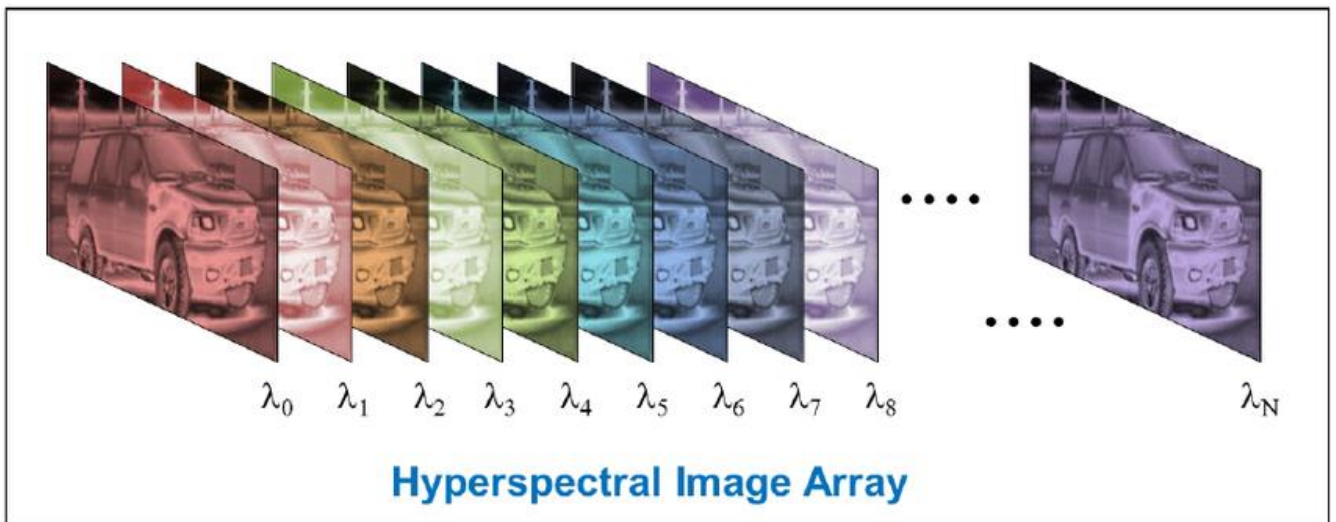

**No RF Emission**  
**100% Optical**

## Hyper Spectral Imaging Technology

**Highly accurate results**  
**Detects all type of Explosives and Narcotics**

## How HYPER5000 Works

Chemical Imaging combines molecular spectroscopy and digital imaging, and has been shown for rapid, non-contact optical sensing of explosives and materials associated with the use of homemade explosives (HMEs).

Chemical Imaging that combines hyperspectral imaging, short wave infrared (SWIR) hyperspectral imaging and/or fluorescence hyperspectral imaging is suitable for the detection of trace levels of explosives in the presence of complex environmental backgrounds without the use of amplification or enhancement techniques.
